RESEARCH PROFILE

Master's student working on sparse-view 3D reconstruction with NeRF. Research experience includes literature review, modifying a PyTorch-based implementation, and inspecting training logs and rendered images. Industry experience spans image-generation AI research and AI-assistant development.

EDUCATION

Tokyo University of Technology | Apr 2026 - Mar 2028 (expected)

Graduate School of Bionics, Computer and Media Sciences, Master's Program in Computer Science. First-year master's student.

Tokyo University of Technology | Apr 2022 - Mar 2026

Faculty of Computer Science, Department of Computer Science, Artificial Intelligence major.

RESEARCH EXPERIENCE

Sparse-view NeRF artifact analysis | Ongoing master's research

Investigating floating artifacts in FrugalNeRF-based 3D reconstruction, particularly in white and textureless regions. Modify code and examine images and training logs to identify where and when artifacts appear.

Exploring confidence derived from cross-scale reprojection error to guide geometric constraints in unreliable regions. Currently organizing artifact occurrence conditions and training behavior to support systematic evaluation. Validation is ongoing.

INDUSTRY EXPERIENCE

neoAI | AI Engineering Intern | Jun 2024 - Present

Led an image-AI joint research project with an entertainment company for approximately one year as sub-project manager and technical theme lead. Responsibilities covered problem definition, method selection, implementation, evaluation, progress reporting, and client alignment. This assignment has concluded.

Built an AI-assistant prototype for the team's own use; after the client reviewed it, it became one of the project's main pillars. Currently contribute to AI-assistant development on a different project.

TECHNICAL ACTIVITIES

NVIDIA Student Ambassador (AI course) | Apr 2026 - Present

Selected for a university-focused technical development program. Learn AI-related technologies with guidance from NVAITC researchers and communicate technical work through workshop presentations.

TECHNICAL SKILLS

Python (3+ years), PyTorch, Linux (3 years), Shell (1.5-2 years).

NeRF / FrugalNeRF experimentation, image-generation AI, technical literature review, research prototyping, and AI-assistant development. Ruby experience includes a bulletin-board application.
